

## WHO WE ARE

A content-based organization committed in developing interventions for learning problems. Our mission is to design, develop, and deliver solutions that will help achieve our vision of an Educated Philippines, where people have access to innovative learning platforms, and use reasoning and empathy to make decisions.

## WHAT WE DO

The team is expert in learning experience design, systems development, and application of user experience and design thinking principles to develop interventions for different sectors in the country. We are constantly looking for opportunities to improve methods of teaching by working with community partners, and utilizing emerging technologies.

### DISASTER PREPAREDNESS SIMULATOR

An immersive learning experience in facing natural disasters in the Philippines. Through the use of simulated experiences, users can see and experience the effects of actions and decisions they make during various disaster situations while applying the necessary safety measures in a safe and controlled learning environment.

## WHY PARTNER

Pioneering a unique learning experience for learners is an opportunity for both your institution and our startup to understand how we can implement low-cost emerging technologies into the classroom. Together, we can significantly change how disaster preparedness is taught and achieved.

**Let's aim for an  
Educated  
Philippines**
